

CLAIMS

- [1] A disposable wig comprising a base formed of an extremely thin sheet, hair segments implanted onto said base and an adhesive layer formed on an underside of said base, characterized in that thickness of said base is of the order of microns(μ), said adhesive layer is formed on an entire underside of said base with a uniform thickness, having projected portions and remaining portions, said projected portions engaging root portions of the implanted hair segments protruding from said underside of said base, and said projected portions are raised toward a surface side of said base when said wig is fitted onto a human skin.
- [2] The disposable wig defined in claim 1 characterized in that thickness of said adhesive layer is in a range of up to about 20 times greater than thickness of said base.
- [3] The disposable wig defined in claim 1 characterized in that said projected portions of said adhesive layer have height of 80 microns.
